1 介绍

ROS 环境下示例代码文件位于发布目录"Sample-ROS"下,主要包括两个 Package 包(celex5_msgs 和 celex5_monocular),其中 celex5_msgs 包是自定义 ROS 消息包,celex5_monocular 包是 CeleX5 单目功能包。本示例在 Ubuntu 16.04 下基于 Kinetic 版本 ROS 环境编译运行。

CeleX5 单目功能包中包括如下五个文件夹及文件:

- ◆ celex5dependencies: 该文件夹中包括单目 API 头文件及库文件(Ubuntu 16.04)。
- ◆ include: 该文件夹存放的是单目功能包头文件。
- ◆ launch: 该文件中存放 roslaunch 启动文件。
- ◆ nodes: 该文件夹存放 rosrun 的启动节点文件。
- ◆ src: 该文件夹中存放单目功能包的源文件。
- ◆ CMakeLists.txt: 用于可执行文件的编译。

2 CeleX5 单目功能包的编译

单目功能包的编译需要将 celex5_msgs 和 celex5_monocular 文件放置到创建好的 ROS 工作空间中的 *src* 目录下。如下图所示,当前的 ROS 工作空间名为 catkin_ws,进到工作空间中使用 *catkin_make* 命令,即可编译 src 目录下所有 catkin 工程。(注:编译依赖 OpenCV,用户需要自行配置 Ubuntu 下的 OpenCV 环境,本示例使用的是 OpenCV 3.3.0 版本)

```

3 CeleX5 单目功能包的运行

编译成功后,在工作空间的/devel/lib/celex5_monocular/目录下会生成可执行文件 *celex5_monocular_node*(主动获取数据)和 *celex5_monocular_callback_node*(回调方式获取数据)。 用户需要将执行文件所必需的.xml配置文件(/home/YOUR_WORKSPACE/src/celex5_monocular/celexdependencies/monocular/config/*)拷贝到可执行文件目录下(/home/YOUR_WORKSPACE/devel/lib/celex5_monocular/)。

在运行 ROS 包之前,首先要先运行 roscore。然后,我们可以利用 rosrun 或者 roslaunch 来运行节点。由于 CeleX5 的启动需要获取 libusb 权限,为了保证能成功运行节点程序,我们先直接进入到 root 权限。

```
noot@ubuntu: /home/hana/catkin_ws
hana@ubuntu:~/catkin_ws$ sudo su
[sudo] password for hana:
root@ubuntu:/home/hana/catkin_ws# source ./devel/setup.bash
root@ubuntu:/home/hana/catkin_ws# rosrun celex5_monocular celex
celex5datamanager.h
                                         celex5processeddata.h
celex5.h
                                         celex5_ros_callback_node.cpp
celex5_monocular_callback.launch celex5_ros.cpp
celex5_monocular_callback_node celex5_ros.h
celex5 monocular.launch
                                         celex5 ros node.cpp
celex5_monocular_node
                                        celextypes.h
root@ubuntu:/home/hana/catkin_ws# rosrun celex5_monocular celex5_monocular_node
XBase::getApplicationDirPath: readiink count = 09
XBase::getApplicationDirPath: readlink count = 69
****** HHXmlReader::importCommands_CeleX5 Begin ********
******* HHXmlReader::importCommands CeleX5 End ********
--- Disable PLL ---
--- Load PLL Parameters ---
CeleX5::writeCSRDefaults: PLL_Parameters
--- Enable PLL ---
--- Disable MIPI ---
```

如果出现 package *** not found 或者是 tab 不出 rosrun 等命令时,可以使用 source ./devel/setup.bash 刷新环境。

```
noncellar.launch http://loo //home/hana/catkin_ws/src/celex5_monocular/launch/celex5_monocular.launch
root@ubuntu:/home/hana/catkin ws# roslaunch celex5 monocular celex5 monocular.la
